

Laminated Material Premium Thermal Cutter Blade B (Model: W.EVA.CUTTER.P.BLB)

- When laminating glass it is common for the EVA to form a small bead around the perimeter of glass. This occurs during the melting phase of the process.
- Our range of cutting blades ensure that this can be easily removed ready for installation.
- Blade B is most commonly used to remove EVA from the arris of the glass, following the line of the polished edge.
- 0.80mm thickness ensures prolonged use, reducing the constant need to replace.
